Assessment Overview

From Thursday, December 5 to Tuesday, December 11 the digital forensic analysis of the Dell CPi computer case, found on 09/20/04, focuses on identifying hacking software, evidence of its use and any data generated during its operation. First, the system should be checked for programs or tools associated with traffic interception activities, such as packet sniffers or software to steal sensitive information (credit card numbers, passwords, etc.). In addition, it is crucial to investigate possible fingerprints connecting the computer to the suspect, G=r=e=e=g S=c=h=a=r=d=t (aka “Mr. Evil”), who is known to intercept traffic on public Wi-Fi hotspots. In analyzing the evidence, we will be looking for any data related to intercepted internet traffic and sensitive data such as credit card numbers or login credentials that could link the suspect to the device. The goal is to determine if this equipment was involved in illegal activities and if a direct link to the suspect can be established based on the information recovered during the forensic analysis.

1.Planning: defined the scope and steps required for forensic analysis of the Dell CPi computer. Using Kali Linux, which is a distribution specialized in penetration testing and forensic analysis.

2.Discovery: began with data collection and analysis in search of relevant evidence.

3.Attacking: checked whether the computer was used for illegal activities and how it relates to the suspect.

4.Reporting: Documentation of attack and possible mitigation options.

Plan → Discovery → Attack → Report

Scope

Assessment	Details
External Penetration Test	Hacking Case (nist.gov)

Scope Exclusions

There will be no scope exclusions regarding Digital Forensics as all testing will be conducted in a secure and controlled laboratory environment.

Client Allowances

The permissions required to perform the tests will be provided by the laboratory teacher, which will allow full access to all necessary files and resources.

External Penetration Test Findings

External Penetration Test Findings

Description:	forensic analysis of the Dell CPi focuses on identifying hacking software, evidence of traffic interception, and data theft tools. The goal is to link the suspect, Gregg Schardt ("Mr. Evil"), to illegal activities using recovered evidence like intercepted internet traffic or sensitive data.
Impact:	Critical
System:	Windows
References:	Hacking Case (nist.gov)

Exploit proof of contest

I got the DD images

1. What is the image of a hash? Does the acquisition and verification hash match?

First, I checked if I had the necessary DD images, and then a merge of all of them into a single consolidated DD image was performed. Subsequently, the MD5 checksum was generated and verified to ensure the integrity of the merged data.

- Image Hash : aee4fcd9301c03b3b054623ca261959a
- the acquisition and verification match correctly.

```
(kali@kali)-[~/hacking_case]
$ ls
index.html  SCHARDT.001  SCHARDT.002  SCHARDT.003  SCHARDT.004  SCHARDT.005  SCHARDT.006  SCHARDT.007  SCHARDT.008  SCHARDT.dd

(kali@kali)-[~/hacking_case]

003:  _____ 0009510480  0009514259  0000003780  Unallocated
```

Extract software, which contains OS information saved in Win registry

fls -rF -o 63 SCHARDT.dd

- fls: Lists the files and directories contained in a forensic image or file system.
- -r: Searches recursively through subdirectories.
- -F: Displays additional details such as file flags.
- -o 63: Indicates that the file system starts at offset 63 (usually used with disk images).
- SCHARDT.dd: Is the forensic image you are analyzing.

Result: Lists all files and directories in the SCHARDT.dd image, searching all subdirectories.

grep -i software

- grep: Filters lines containing the specified text.
- -i: Ignores upper and lower case.
- software: Is the keyword to be searched for.

Result: Filters only the lines containing the word “software” in the output of fls.

icat -o 63 SCHARDT.dd 336 > software

- icat: Extracts a specific file from a forensic image.
- -o 63: Indicates that the file system starts at offset 63.
- SCHARDT.dd: Is the forensic image.
- 336: Is the inode number of the file you want to extract (obtained from the output of fls).
- software: Save the extracted file with the name software.

Result: Extracts the file identified with the inode 336 and saves it in the system as software.

ls software -l

- ls: Lists the files in the current directory.
- -l: Displays extended details such as permissions, size and date.

Result: Displays detailed information about the extracted file named software.

```
(kali@kali)-[~/hacking_case]
$ fls -rF -o 63 SCHARDT.dd | grep -i software
r/r 9895-128-4: Program Files/Anonymizer/Toolbar/Images/software-A.bmp

(kali@kali)-[~/hacking_case]
$ icat -o 63 SCHARDT.dd > software
Missing image name and/or address
usage: icat [-hrRsvV] [-f fstype] [-i imgtype] [-b dev_sector_size] [-o imgoffset] image [images] inum[-typ[-id]]
-h: Do not display holes in sparse files
-r: Recover deleted file
-R: Recover deleted file and suppress recovery errors
-s: Display slack space at end of file
-i imgtype: The format of the image file (use '-i list' for supported types)
-b dev_sector_size: The size (in bytes) of the device sectors
-f fstype: File system type (use '-f list' for supported types)
-o imgoffset: The offset of the file system in the image (in sectors)
-P pooltype: Pool container type (use '-P list' for supported types)
-B pool_volume_block: Starting block (for pool volumes only)
-S snap_id: Snapshot ID (for APFS only)
-v: verbose to stderr
-V: Print version
-k password: Decryption password for encrypted volumes

(kali@kali)-[~/hacking_case]
$ icat -o 63 SCHARDT.dd 336 > software

(kali@kali)-[~/hacking_case]
$ ls software -l
-rw-r--r-- 1 kali kali 8650752 Dec  8 17:00 software
```

Then, I found regrip plugin and winver mmls

- Regrip plugin: A tool or script (likely for RegRipper) to extract registry information.
- winver: Command to check Windows version.

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -l | grep -i winver

190. winver v.20200525 [Software]

(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/software -p winver
Launching winver v.20200525
winver v.20200525
(Software) Get Windows version & build info
```

ProductName	Microsoft Windows XP
BuildLab	2600.xpclient.010817-1148
RegisteredOrganization	N/A
RegisteredOwner	Greg Schardt
InstallDate	2004-08-19 22:48:27Z

The operating system used on the computer is Windows XP

3. When was the install date?

The installation date is 08/19/04 22:48:27 PM

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -l | grep -i winver

190. winver v.20200525 [Software]

(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/software -p winver
Launching winver v.20200525
winver v.20200525
(Software) Get Windows version & build info
```

ProductName	Microsoft Windows XP
BuildLab	2600.xpclient.010817-1148
RegisteredOrganization	N/A
RegisteredOwner	Greg Schardt
InstallDate	2004-08-19 22:48:27Z

4. What is the timezone settings?

First, I search for system, then extract system and then search for the time zone. We use the same commands, except egrep -i config/system\$, where :

- egrep: Is a variant of grep, which allows to use extended regular expressions (that's why the "e" in egrep).
- i: Specifies that the search should be case insensitive, i.e., it does not matter if the text is in upper or lower case.
- config/system\$: This is the pattern you are looking for. The explanation of this pattern is:
- config/system: search for the exact string config/system.
- \$: This is a special symbol in regular expressions that means "end of line". This indicates that the string config/system must be at the end of the line.

```
(kali@kali)-[~/hacking_case]
$ fls -rF -o 63 SCHARDT.dd | egrep -i config/system$
r/r 334-128-4: WINDOWS/system32/config/system

(kali@kali)-[~/hacking_case]
$ icat -o 63 SCHARDT.dd 334 > system

(kali@kali)-[~/hacking_case]
$ cd RegRipper3.0

(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/system -p timezone
Launching timezone v.20200518
timezone v.20200518
(System) Get TimeZoneInformation key contents

TimeZoneInformation key
ControlSet001\Control\TimeZoneInformation
LastWrite Time 2004-08-19 17:20:02Z
DaylightName → Central Daylight Time
StandardName → Central Standard Time
Bias → 360 (6 hours)
ActiveTimeBias → 300 (5 hours)
```

The timezone settings is Central Daylight Time (-05hrs GMT)

5. Who is the registered owner?

The registered owner is Greg Schardt

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -l | grep -i winver

190. winver v.20200525 [Software]

(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/software -p winver
Launching winver v.20200525
winver v.20200525
(Software) Get Windows version & build info

ProductName          Microsoft Windows XP
BuildLab              2600.xpclnt.010817-1148
RegisteredOrganization N/A
RegisteredOwner       Greg Schardt
InstallDate           2004-08-19 22:48:27Z
```

6. What is the computer account name?

The computer account name is N-1A9ODN6ZXK4LQ

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/system -p compname
Launching compname v.20090727
compname v.20090727
(System) Gets ComputerName and Hostname values from System hive
ComputerName = N-1A9ODN6ZXK4LQ
TCP/IP Hostname = n-1a9odn6zxk4lq
```

7. What is the primary domain name?

I need to do the following:

- Search for the workgroup in the system event log and extract the event log: First, the system event log is dumped, then Download evtparse, and then Test evtparse.

```
(kali@kali)-[~/hacking_case]
$ fls -rF -o 63 SCHARDT.dd | egrep -i config/sysevent
r/r 3678-128-1: WINDOWS/system32/config/SysEvent.Evt

(kali@kali)-[~/hacking_case]
$ icat -o 63 SCHARDT.dd 3678 > SysEvent.Evt

(kali@kali)-[~/hacking_case]
$ ls
index.html  SCHARDT.001  SCHARDT.003  SCHARDT.005  SCHARDT.007  SCHARDT.dd  SysEvent.Evt
RegRipper3.0 SCHARDT.002  SCHARDT.004  SCHARDT.006  SCHARDT.008  software   system

(kali@kali)-[~/hacking_case]
$ ls -l SysEvent.Evt
-rw-r--r-- 1 kali kali 65536 Dec  8 17:54 SysEvent.Evt
```

- Find a tool to analyze the event log

```
(kali@kali)-[~/hacking_case]
$ git clone https://github.com/keydet89/Tools.git
Cloning into 'Tools'...
remote: Enumerating objects: 193, done.
remote: Counting objects: 100% (27/27), done.
remote: Compressing objects: 100% (20/20), done.
remote: Total 193 (delta 13), reused 16 (delta 7), pack-reused 166 (from 1)
Receiving objects: 100% (193/193), 8.37 MiB | 3.81 MiB/s, done.

Updating files: 100% (67/67), done.

(kali@kali)-[~/hacking_case]
$ perl Tools/source/evtparse.pl
evtparse [option]
Parse Event log (Win2000, XP, 2003)

-e file.....Event log (full path)
-d dir.....Directory where .evt files are located
-s .....Output in sequential format (record number and time
generated values ONLY - use to see if system time may
have been tampered with)
-t .....TLN output (default .csv)
-h .....Help (print this information)

Ex: C:\>evtparse -e secevent.evt -t > timeline.txt
C:\>evtparse -e sysevent.evt -s

**All times printed as GMT/UTC

copyright 2012 Quantum Analytics Research, LLC
```

The perl command `Tools/source/evtparse.pl -e SysEvent.Evt -t > SysEvent.txt` runs a Perl script that processes the event file SysEvent.Evt with options -e (specifies the input file) and -t (probably to format the output). It then saves the result to SysEvent.txt.

```
(kali㉿kali)-[~/hacking_case]
$ perl Tools/source/evtparse.pl -e SysEvent.Evt -t > SysEvent.txt

(kali㉿kali)-[~/hacking_case]
$ ls -l SysEvent.*
-rw-r--r-- 1 kali kali 65536 Dec  8 17:54 SysEvent.Evt
-rw-r--r-- 1 kali kali 14183 Dec  8 18:04 SysEvent.txt
```

- Find domain information

```
(kali㉿kali)-[~/hacking_case]
$ cat SysEvent.txt

```

The primary domain name is Evil

8. When was the last recorded computer shutdown date/time?

The last recorded computer shutdown date/time is 08/27/04 15:46:33AM

```
(kali㉿kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/system -p shutdown
Launching shutdown v.20200518
shutdown v.20200518
(System) Gets ShutdownTime value from System hive

ControlSet001\Control\Windows key, ShutdownTime value
LastWrite time: 2004-08-27 15:46:33Z
ShutdownTime : 2004-08-27 15:46:33Z
```

9. How many accounts are recorded (total number)?

All Windows user account names, SIDs (Security Identifiers), login counts, creation dates, last password change dates, groups, and much more can be found in the Windows Registry SAM (Security Account Manager) file.

```
(kali@kali)-[~/hacking_case]
$ fls -rF -o 63 SCHARDT.dd | egrep -i config/sam
r/r 3667-128-4: WINDOWS/system32/config/SAM
r/r 3668-128-4: WINDOWS/system32/config/SAM.LOG

(kali@kali)-[~/hacking_case]
$ icat -o 63 SCHARDT.dd 3667 > SAM
```

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/SAM -p samparse
Launching samparse v.20220921
samparse v.20220921
(SAM) Parse SAM file for user & group mbrshp info

Domain Accounts
```

The last user to logon to the computer is Mr. Evil

12. A search for the name of “G=r=e=g S=c=h=a=r=d=t” reveals multiple hits. One of these proves that G=r=e=g S=c=h=a=r=d=t is Mr. Evil and is also the administrator of this computer. What file is it? What software program does this file relate to?

Approach

- Search “Greg” and check if the name associated with “Evil”
- To search, I need to mount the DD image

First, create a mounting point, then I set up a loop device. With this I can mount dd to the mounting point .

```
(kali@kali)-[~/hacking_case]
$ sudo mkdir /mnt/loop
[sudo] password for kali:

(kali@kali)-[~/hacking_case]
$ sudo losetup --partscan --find --show --read-only SCHARDT.dd
/dev/loop0

(kali@kali)-[~/hacking_case]
$ ls -l loop0*
ls: cannot access 'loop0*': No such file or directory

(kali@kali)-[~/hacking_case]
$ ls -l /dev/loop0*
brw-rw---- 1 root disk  7, 0 Dec  8 18:49 /dev/loop0
brw-rw---- 1 root disk 259, 0 Dec  8 18:49 /dev/loop0p1

(kali@kali)-[~/hacking_case]
$ sudo mount /dev/loop0p1 /mnt/loop
Error opening '/dev/loop0p1' read-write
Could not mount read-write, trying read-only

(kali@kali)-[~/hacking_case]
$ ls /mnt/loop
AUTOEXEC.BAT  COMMAND.COM  hiberfil.sys  NETLOG.TXT  RECYCLER  Temp
boot.ini      CONFIG.SYS  IO.SYS        ntdetect.com  SETUPLOG.TXT  VIDEOROM.BIN
BOOTLOG.PRIV  DETLOG.TXT  MSDOS.____  ntldr        SUHDLOG.DAT  WIN98
BOOTLOG.TXT   'Documents and Settings'  MSDOS.SYS    pagefile.sys  SYSTEM.IST   WINDOWS
BOOTSECT.DOS  FRUNLOG.TXT  'My Documents'  'Program Files'  'System Volume Information'
```

Now, I search globally for the string “Grep Schardt”

```
(kali@kali)-[~/hacking_case]
$ grep -rn "/mnt/loop/" -e "Greg Schardt"
/mnt/loop/Program Files/Look@LAN/irunin.ini:29:%REGOWNER%=Greg Schardt
/mnt/loop/Program Files/Look@LAN/irunin.ini:396:%USERNAME%=Greg Schardt
/mnt/loop/WINDOWS/Look@LAN Setup Log.txt:42:Value data = Greg Schardt
```

Observation:

- look@lan is a software because it was installed under the “Program Files” folder
- look@lan has a configuration file named “irunin.ini”
- The initial config file has owner and user name information.
- The config file has a setup log

With this, I can search for the string “evil”

```
(kali@kali)-[~/hacking_case]
$ cat "/mnt/loop/Program Files/Look@LAN/irunin.ini" | grep -i "evil"
%LANUSER%=Mr. Evil
%DESKTOP%=C:\Documents and Settings\Mr. Evil\Desktop
%STARTMENU%=C:\Documents and Settings\Mr. Evil\Start Menu
%STARTMENUPROGRAMS%=C:\Documents and Settings\Mr. Evil\Start Menu\Programs
%STARTUP%=C:\Documents and Settings\Mr. Evil\Start Menu\Programs\Startup
%MYDOCUMENTSDIR%=C:\Documents and Settings\Mr. Evil\My Documents
%SRCFILE%=C:\Documents and Settings\Mr. Evil\Desktop\lalsetup250.exe
%SRCDIR%=C:\Documents and Settings\Mr. Evil\Desktop

(kali@kali)-[~/hacking_case]
$ cat "/mnt/loop/WINDOWS/Look@LAN Setup Log.txt" | grep -i "evil"
C:\Documents and Settings\Mr. Evil\Desktop\Look@LAN.lnk
C:\Documents and Settings\Mr. Evil\Desktop\Look@Host.lnk
```

```
(kali@kali)-[~/hacking_case]
$ strings '/mnt/loop/Documents and Settings/Mr. Evil/Local Settings/History/History.IE5/index.dat' | grep -i greg
Visited: Mr. Evil@http://edit.yahoo.com/config/id_check?fn=Greg&ln=Schardt&id=mrevil2000&u=b568cfp0ic6g0

(kali@kali)-[~/hacking_case]
$ strings '/mnt/loop/Documents and Settings/Mr. Evil/Local Settings/History/History.IE5/MSHist012004081620040823/index.dat' | grep -i 'greg'
:2004081620040823: Mr. Evil@http://edit.yahoo.com/config/id_check?fn=Greg&ln=Schardt&id=mrevil2000&u=b568cfp0ic6g0
```

13. List the network cards used by this computer

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/software -p networkcards
Launching networkcards v.20200518
networkcards v.20200518
(Software) Get NetworkCards Info

NetworkCards
Microsoft\Windows NT\CurrentVersion\NetworkCards

Description                                Key LastWrite time
Compaq WL110 Wireless LAN PC Card           2004-08-27 15:31:44Z
Xircom CardBus Ethernet 100 + Modem 56 (Ethernet Interface) 2004-08-19 17:07:19Z
```

Xircom CardBus Ethernet 100 + Modem 56 (Ethernet Interface) and Compaq WL110 Wireless LAN PC Card are the network cards used by this computer

14. This same file reports the IP address and MAC address of the computer. What are they?

I need to:

- list all files contain IP address and list all files contain MAC address

```
(kali@kali)-[~/hacking_case]
$ egrep -rIl '\b[0-9]{1,3}\.[0-9]{1,3}\.[0-9]{1,3}\.[0-9]{1,3}\b' '/mnt/loop/' > ip.txt

(kali@kali)-[~/hacking_case]
$ egrep -rIl '^[^/]\b[0-9a-fA-F]{12}\b' '/mnt/loop/' > mac.txt

(kali@kali)-[~/hacking_case]
$ comm -12 ip.txt mac.txt

comm: file 1 is not in sorted order
/mnt/loop/Program Files/Look@LAN/irunin.ini
/mnt/loop/Program Files/mIRC/channels/channels.txt
comm: file 2 is not in sorted order
comm: input is not in sorted order
```

- Find intersection of two files

```
(kali@kali)-[~/hacking_case]
$ grep -rP '\b\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\b' '/mnt/loop/Program Files/Look@LAN/irunin.ini'

%LANIP%=192.168.1.111

(kali@kali)-[~/hacking_case]
$ egrep -r '^[^/]\b[0-9a-fA-F]{12}\b' '/mnt/loop/Program Files/Look@LAN/irunin.ini'

%LANNIC%=0010a4933e09
```

- the IP address: 192.168.1.111
- MAC address : 0010a4933e09

15. An internet search for vendor name/model of NIC cards by MAC address can be used to find out which network interface was used. In the above answer, the first 3 hex

characters of the MAC address report the vendor of the card. Which NIC card was used during the installation and set-up for LOOK@LAN?

www.adminsub.net/mac-address-finder/XIRCOM

adminsubnet
English | Русский | Deutsch | Español

IPv4 Subnet Calculator Password Generator/Decryptor

MAC Address Finder

MAC address or vendor:

Enter first 6 characters or full MAC address. Or search by Vendor name, e.g. cisco or apple

Database updated - April 25, 2020

Search results for "XIRCOM"

MAC	Vendor
0080C7	XIRCOM
0010A4	XIRCOM
00053C	XIRCOM

%LANNIC%=0010a4933e09

The NIC card was used during the installation and set-up for LOOK@LAN is Xircom

16. Find 6 installed programs that may be used for hacking.

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/software -p uninstall
Launching uninstall v.20200525
uninstall v.20200525

2004-08-20 15:08:19Z
  Forté Agent

2004-08-20 15:07:25Z
  Faber Toys v.2.4 Build 216

2004-08-20 15:05:58Z
  Cain & Abel v2.5 beta45

2004-08-20 15:05:09Z
  Anonymizer Bar 2.0 (remove only)

2004-08-19 23:04:50Z
  WebFldrs XP v.9.50.5318

2004-08-19 23:04:36Z
  Microsoft NetShow Player 2.0
  MPlayer2

```

The 6 installed programs that may be used for hacking were :

- Cain & Abel v2.5 beta45 (password sniffer & cracker)
- Ethereal (packet sniffer)
- 123 Write All Stored Passwords (finds passwords in registry)
- Anonymizer (hides IP tracks when browsing)
- CuteFTP (FTP software) Look&LAN_1.0 (network discovery tool)
- NetStumbler (wireless access point discovery tool)

17. What is the SMTP email address for Mr. Evil?

First, I search for ntuser.data that Contains User Profile Settings, then I extract evil ntuser.data and for the last I search the email pattern.

```

(kali@kali)-[~/hacking_case]
$ fls -rF -o 63 SCHARDT.dd | grep -i "ntuser.dat"
r/r 7324-128-4: Documents and Settings/Default User/NTUSER.DAT
r/r 391-128-4: Documents and Settings/LocalService/NTUSER.DAT
r/r 418-128-4: Documents and Settings/LocalService/ntuser.dat.LOG
r/r 345-128-4: Documents and Settings/Mr. Evil/NTUSER.DAT
r/r 9798-128-4: Documents and Settings/Mr. Evil/ntuser.dat.LOG
r/r 350-128-4: Documents and Settings/NetworkService/NTUSER.DAT
r/r 377-128-4: Documents and Settings/NetworkService/ntuser.dat.LOG
r/r 9746-128-4: WINDOWS/repair/ntuser.dat

(kali@kali)-[~/hacking_case]
$ icat -o 63 SCHARDT.dd 345 > NTUSER_Evil.DAT

```

```
(kali@kali)-[~/hacking_case]
$ strings NTUSER Evil.DAT | grep -iP '\b^[a-zA-Z0-9_@-]+\.[a-zA-Z0-9_@-]+\.[a-zA-Z0-9_@-]{2,4}\b'
whoknowsme@sbcglobal.net
xe@shdoclc.dll,-866
Look@LAN.lnk
Look@LAN.lnk
Look@LAN.lnk
```

The SMTP email address for Mr. Evil is whoknowsme@sbcglobal.net

18. What are the NNTP (news server) settings for Mr. Evil?

To do this, I needed to:

- Find new applications installed

```
(kali@kali)-[~/hacking_case/RegRipper3.0]
$ perl rip.pl -r ~/hacking_case/software -p uninstall
Launching uninstall v.20200525
uninstall v.20200525
(Software, NTUSER.DAT) Gets contents of Uninstall keys from Software, NTUSER.DAT hives
```

2004-08-20 15:08:19Z	2004-08-19 22:31:51Z
Forté Agent	AddressBook
	ICW
	OutlookExpress

- Find the application installation directory where I searched for installed Forte Agent.

```
(kali@kali)-[~/hacking_case]
$ fls -rF -o 63 SCHARDT.dd | grep -i "agent" | head
r/r 10064-128-1: Documents and Settings/Mr. Evil/Desktop/Tools/Agent.lnk
r/r 10065-128-4: Documents and Settings/Mr. Evil/Start Menu/Programs/Agent Newsreader/Agent Help.lnk
r/r 10066-128-1: Documents and Settings/Mr. Evil/Start Menu/Programs/Agent Newsreader/Readme.lnk
r/r 10210-128-3: My Documents/ARCHIVE/Arj/AGENTS.TXT
r/r 10055-128-3: Program Files/Agent/8859-1.cod
r/r 10057-128-3: Program Files/Agent/8859-15.cod
r/r 10056-128-3: Program Files/Agent/8859-1w.cod
r/r 10013-128-3: Program Files/Agent/agent.cnt
r/r 10009-128-3: Program Files/Agent/agent.exe
r/r 10012-128-3: Program Files/Agent/agent.hlp
```

- Search for configuration files or key words where first I looked for Forte Agent configuration files or data.

```
(kali@kali)-[~/hacking_case]
$ fls -rF -o 63 SCHARDT.dd | grep -i "Program Files/Agent/"
r/r 11730-128-3: Program Files/Agent/Data/0000168F.IDX
r/r 11731-128-3: Program Files/Agent/Data/0000169B.DAT
r/r 11732-128-3: Program Files/Agent/Data/0000169B.IDX
r/r 11406-128-4: Program Files/Agent/Data/AGENT.INI
r/r 11416-128-1: Program Files/Agent/Data/errorlog.txt
r/r 11420-128-1: Program Files/Agent/Data/FILTERS.DAT
r/r 11423-128-1: Program Files/Agent/Data/FILTERS.IDX
r/r 11727-128-3: Program Files/Agent/Data/GROUPS.DAT
```

Now, I found news server configuration

```
(kali@kali)-[~/hacking_case]
$ icat -o 63 SCHARDT.dd 11406 | more

;AGENT.INI

r/r 11317-128-1: Program Files/mIRC/logs/m5star.UnderNet.log
```

The IRC channels that the user of this computer accessed:

- Ushells.undernet.log
- Elite.hackers.undernet.log
- Mp3xserv.undernet.log
- Chataholics.undernet.log
- Cybercafé.undernet.log
- M5star.undernet.log
- Thedarktower.afternet.log
- Funny.undernet.log
- Luxshell.undernet.log
- Evilfork.efnet.log
- Iso-warez.efnet.log
- Houston.undernet.log

23. Ethereal, a popular “sniffing” program that can be used to intercept wired and wireless internet packets was also found to be installed. When TCP packets are collected and re-assembled, the default save directory is that users \My Documents directory. What is the name of the file that contains the intercepted data?

- Find the location \Document and Setting\Mr. Evil and then I Searched for TCP packets saved (.pcap)

```
(kali@kali)-[~/hacking_case]
$ ls /mnt/loop/Documents\ and\ Settings/Mr.\ Evil

Application Data Desktop interception My Documents NTUSER.DAT ntuser.ini Recent Start Menu
cookies Favorites Local Settings NetHood ntuser.dat.LOG PrintHood SendTo Templates

(kali@kali)-[~/hacking_case]
$ file /mnt/loop/Documents\ and\ Settings/Mr.\ Evil/interception
/mnt/loop/Documents and Settings/Mr. Evil/interception: pcap capture file, microsecond ts (little-endian) - version 2.4 (Ethernet, capture length 65535)
```

The name of the file that contains the intercepted data is **Interception**.

24. Viewing the file in a text format reveals much information about who and what was intercepted. What type of wireless computer was the victim (person who had his internet surfing recorded) using?

The command that I used is:

- **tshark**: A command line tool for capturing and analyzing network packets (equivalent to Wireshark).
- **-r /mnt/loop/Documents and Settings/Mr.Evil/interception**: Reads a packet capture file (interception), located in the specified path.
- **-Y http.request**: Filters packets to show only those that are HTTP requests.
- **-T fields**: Displays only the fields specified in the output.
- **-e http.user_agent**: Extracts and displays the User-Agent field from HTTP requests, which contains information about the browser or client that made the request.
- **-e http.host**: Extracts and displays the Host field for HTTP requests, which indicates the server to which the request was made.

```
(kali@kali)-[~/hacking_case]
$ tshark -r /mnt/loop/Documents\ and\ Settings/Mr.\ Evil/interception -Y http.request -T fields -e http.user_agent -e http.host

```

The type of wireless computer was the victim using is Windows CE (Pocket PC)

25. What websites was the victim accessing?

The command that I used is:

- tshark: Command line tool for capturing and analyzing network traffic (similar to Wireshark).
- -r /mnt/loop/Documents and Settings/Mr.\ Evil/interception: Specifies the traffic capture file to be analyzed (interception), located in the specified path. Backslashes (backslashes) are necessary to escape spaces in file or folder names.
- Y http.request: Filter the packets to show only those containing HTTP requests.
- T fields: Configures the output to display only the specified fields.
- -e http.user_agent: Extracts the User-Agent field from HTTP requests, which describes the client or browser that made the request.
- -e http.host: Extracts the Host field, which indicates the server or domain to which the request was made.
- /: Passes the output of the tshark command to the next command in the pipeline.
- sort -u:
sort: Sorts the lines alphabetically. -u: Removes duplicate lines, displaying only unique ones.

```
(kali@kali)~[~/hacking_case]
$ tshark -r /mnt/loop/Documents\ and\ Settings/Mr.\ Evil/interception -Y http.request -T fields -e http.user_agent -e http.host
| sort -u
Mozilla/4.0 (compatible; MSIE 4.01; Windows CE; PPC; 240x320) login.passport.com
Mozilla/4.0 (compatible; MSIE 4.01; Windows CE; PPC; 240x320) login.passport.net
Mozilla/4.0 (compatible; MSIE 4.01; Windows CE; PPC; 240x320) mobile.msn.com
Mozilla/4.0 (compatible; MSIE 4.01; Windows CE; PPC; 240x320) www.passportimages.com
```

The websites where the victim access is :

- Mobile.msn.com
- MSN (Hotmail) Email
- Login.passport.com
- Login.passport.net

26. Search for the main users web based email address. What is it?

The command that I used is:

- grep: It is a command to search for text in files.
- -E: Allows the use of extended regular expressions (more advanced than the basic ones).
- -i: Makes the search case insensitive.

- -o: Displays only the text that matches the pattern, instead of the whole line.
- -r: Recursively searches all files and subdirectories within the specified folder.
- -h: Avoid displaying file names in the results.
- -I: Ignores binary files (only processes text files).
- '([[:alnum:]]+@[[:alnum:]]+.[[:alpha:]]{2,6})': This is the regular expression that defines the format of email addresses:
- [[:alnum:]]+.: Searches for alphanumeric characters (letters and numbers), periods (.), underscores (_) and hyphens (-) before the @ symbol.
- @: Matches the @ symbol.
- [[:alnum:]]+.: Searches for similar characters after the @ (domain name).
- \.[[:alpha:]]{2,6}: Searches for a dot (.) followed by between 2 and 6 letters or dots, such as .com, .org, or .co.uk.
- '/mnt/loop/Documents and Settings/Mr. Evil/': Specifies the directory in which to search for emails.

```
(kali@kali)~[~/hacking_case]
$ grep -oir '([[:alnum:]]+@[[:alnum:]]+.[[:alpha:]]{2,6})' "/mnt/loop/Documents and Settings/Mr. Evil/"

View cached webpages

The file name is Showletter[1].htm

28. How many executable files are in the recycle bin?

```
(kali@kali)-[~/hacking_case]
$ ls '/mnt/loop/RECYCLER/S-1-5-21-2000478354-688789844-1708537768-1003'
Dc1.exe Dc2.exe Dc3.exe Dc4.exe desktop.ini INF02
(kali@kali)-[~/hacking_case]
$
```

The executable files are 4

29. Are these files really deleted?

No. They can be restored with this command:

- rifiuti2: It is a tool designed to analyze files in the Recycle Bin of Windows systems. It extracts information about deleted files found in the Recycle Bin.

- '/mnt/loop/RECYCLER/S-1-5-21-2000478354-688789844-1708537768-1003/INFO2':
This is the path to a specific file called INFO2. This is used in older versions of Windows (such as Windows XP) to record metadata about deleted files, such as:
 - Original file name.
 - Full path before deletion.
 - Date of deletion.
 - Size of the file.
- Command process:
 - Parses the INFO2 file.
 - Extracts the information mentioned above.
 - It presents a report on the standard output (usually on the terminal).

```
(kali@kali)-[~]
$ rfiuti2 '/mnt/loop/RECYCLER/S-1-5-21-2000478354-688789844-1708537768-1003/INFO2'
Recycle bin path: '/mnt/loop/RECYCLER/S-1-5-21-2000478354-688789844-1708537768-1003/INFO2'
Version: 5
OS Guess: Windows XP or 2003
Time zone: Coordinated Universal Time (UTC) [+0000]

Index Deleted Time   Gone? Size Path
1      2004-08-25 16:18:25 No    2160128 C:\Documents and Settings\Mr. Evil\Desktop\lalsetup250.exe

4      2004-08-27 15:29:58 No    8460800 C:\Documents and Settings\Mr. Evil\Desktop\ethereal-setup-0.10.6.exe
```

30. How many files are actually reported to be deleted by the file system?

```
(kali@kali)-[~/hacking_case]
$ fls -rFd -o 63 SCHARDT.dd | wc -l
365
```

Actually, it reported to be deleted is 365

31. Perform a Anti-Virus check. Are there any viruses on the computer?

Yes, there any viruses on the computer using this command:

- clamscan: This is the main ClamAV command for performing antivirus scans on files and directories.
- -r (recursive): Performs a recursive scan, i.e. scans all files and subdirectories within the specified path.
- -i (infected): Only shows in the output the files that are infected or suspicious. Clean files will not be listed, which makes the output more concise.

- “/mnt/loop/”: This is the path to the directory to be scanned. In this case, it appears to be a directory mounted on /mnt/loop/, possibly associated with a forensic image or other drive.

```
(kali@kali) ~/hacking_case
$ clamscan -r -i '/mnt/loop'
